8 Preparations

Boiled 6.5 min - Baked for 7 min (200°C) - Baked + Vanilla - Baked + Paprika - Baked + Chocolate

Boiled 8 min - Baked for 15 min (200°C)

Edible insects acceptance of Belgian consumer ?

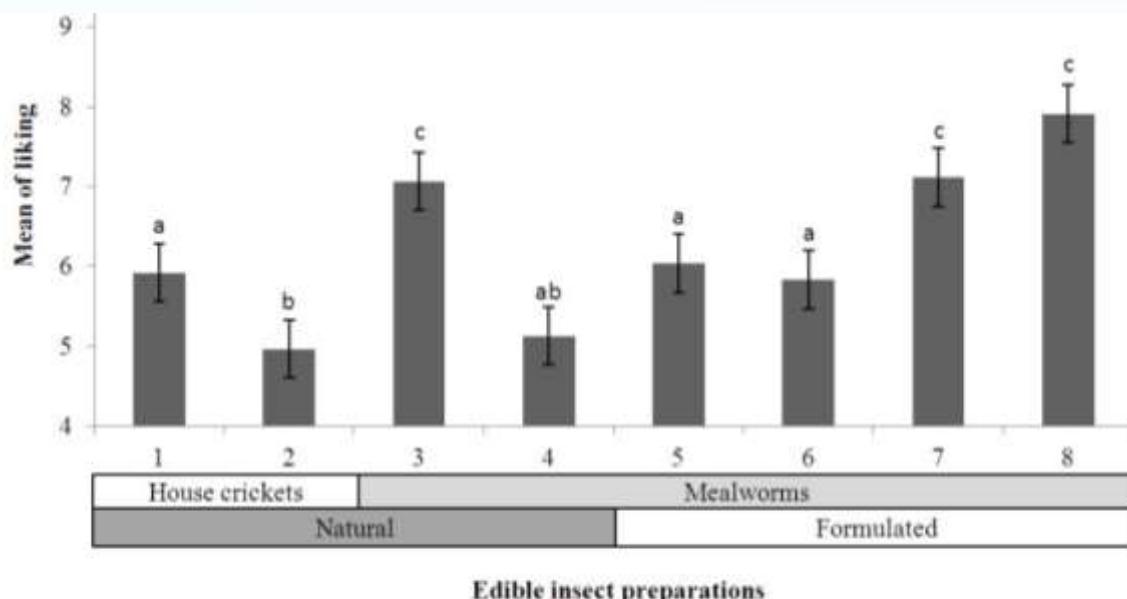

Figure 1: Liking of different meal preparations: (1) house crickets baked; (2) house crickets boiled; (3) mealworms baked; (4) mealworms boiled; (5) crushed mix of both species; (6) mealworms with vanilla; (7) mealworms with paprika; (8) mealworms with chocolate. Different letters show a significant difference for meal preparations at $P < 0.05$ (pairwise comparisons by Tukey's test).

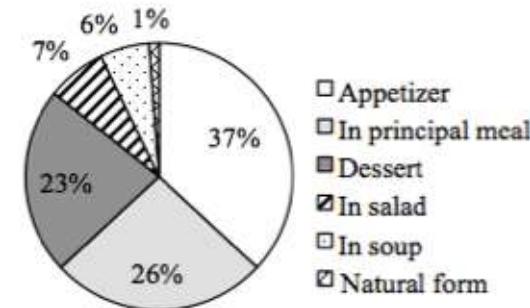

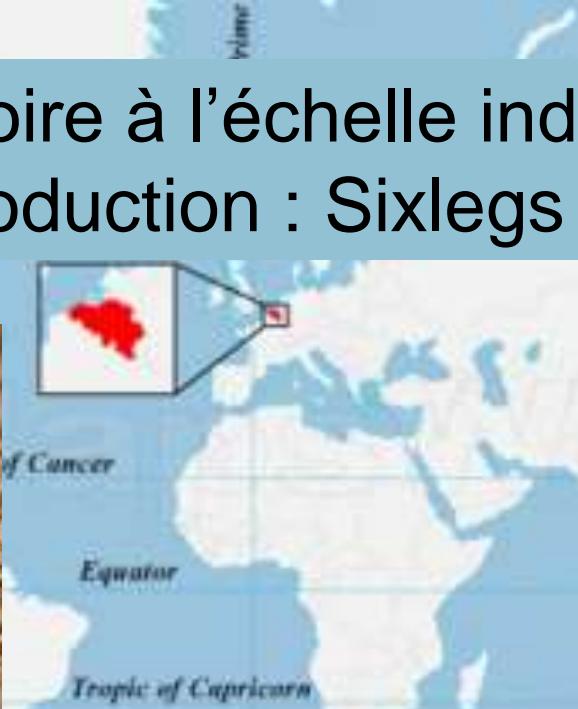

Figure 3: Responses ($n = 97$) to the question: "If yes, in which form would you cook insects?"

Situation en Belgique - 2016

Insectes : feed to food

Du laboratoire à l'échelle industrielle de production : Sixlegs sa

Situation en Europe - 2015

Traditional vs new companies

Countries	Insect growers										Total
	1978	1995	2002	2004	2007	2009	2011	2012	2015	In development	
Belgium		1		1			1		2	1	6
Spain										2	2
France					1	1	2		1		7
Netherlands	1		1		1					4	7
Total	1	1	1	1	1	2	2	1	1	9	22

Conventional companies (before 2010)

Feed & Food	Food only	Feed only	Total
5	1	1	7

→ Slow switch to Food - diversification
but low volumes

New companies (after 2010)

Feed & Food	Food only	Feed only	Total
1	5	0	6

→ Most direct orientation for Food –
high perspectives but low certitude

Situation en Belgique - 2016

Décembre 2013

Federal Agency for the Safety of the Food Chain

Circular concerning the breeding and marketing of insects and insect-based food for human consumption

House cricket	<i>Acheta domesticus</i>
African migratory locust	<i>Locusta migratoria migratorioides</i>
Giant mealworm	<i>Zophobas atratus morio</i>
Mealworm	<i>Tenebrio molitor</i>
Buffalo worm	<i>Alphitobius diaperinus</i>
Wax worm	<i>Galleria mellonella</i>
American desert locust	<i>Schistocerca americana gregaria</i>
Tropical house cricket/banded cricket	<i>Gryllodes sigillatus</i>
Lesser Wax Moth Worm	<i>Achroia grisella</i>
Silkworm	<i>Bombyx mori</i>

Novel Food : 2012-2015 pour discussions &
pour application

Situation in Belgium – 2016

4. Conditions for marketing

4.1. Registration of activities

The activity "breeding of insects" is inserted into the activity tree of the FASFC. The activity belongs to primary production; the direct sale of live animals by the producer is considered as an implicit activity of breeding. The operators, who breed insects, must be registered at the FASFC as mentioned under point 4.1.1. The sale of dead insects or the preparation and marketing of insect-based foodstuffs are activities which need to be registered or authorised by the FASFC. Depending on the exercised activities, registrations or authorisations associated with the codes-place-activity-product under points 4.1.2. to 4.1.4. apply. This is a non-exhaustive list with the most relevant activities. If insects are incorporated in special foodstuffs, other activities can apply. In this case, one refers to the activity tree of the FASFC.

4.2. Main principles of food legislation

For the activities 'breeding and placing on the market insects or insect-based foodstuff for human consumption', the general rules of food legislation are in force and inter alia, in particular the application of the good hygiene practices, the traceability, the obligatory notification, the labelling,... and the implementation of HACCP based self-checking system.

Situation in Belgium - 2015

4.3. Specific aspects linked to food safety which must be taken into account for the insects and the insect-based food for human consumption

- Catering waste, food leftovers and non processed animal **by-products cannot be used for feeding insects** (EC) No 1069/2009. .
- A **heating step** may be needed as a germicidal treatment before the marketing of the product.
- The products, which are placed on the market, must be tested periodically to detect **pathogenic agents** like *Salmonella*, *Listeria*
- It is necessary to take into account the fact that persons allergic to seafood and/or mite can have an **allergic reaction** after consuming insects.

Top 14 Allergens

All foods containing these allergens must be clearly labelled on menus or signs in your catering outlet

Gluten Crustaceans Eggs Celery Milk Fish Tree Nuts
