

Upscaling/downscaling en bioprocédés : synergie entre expérimentation et modélisation

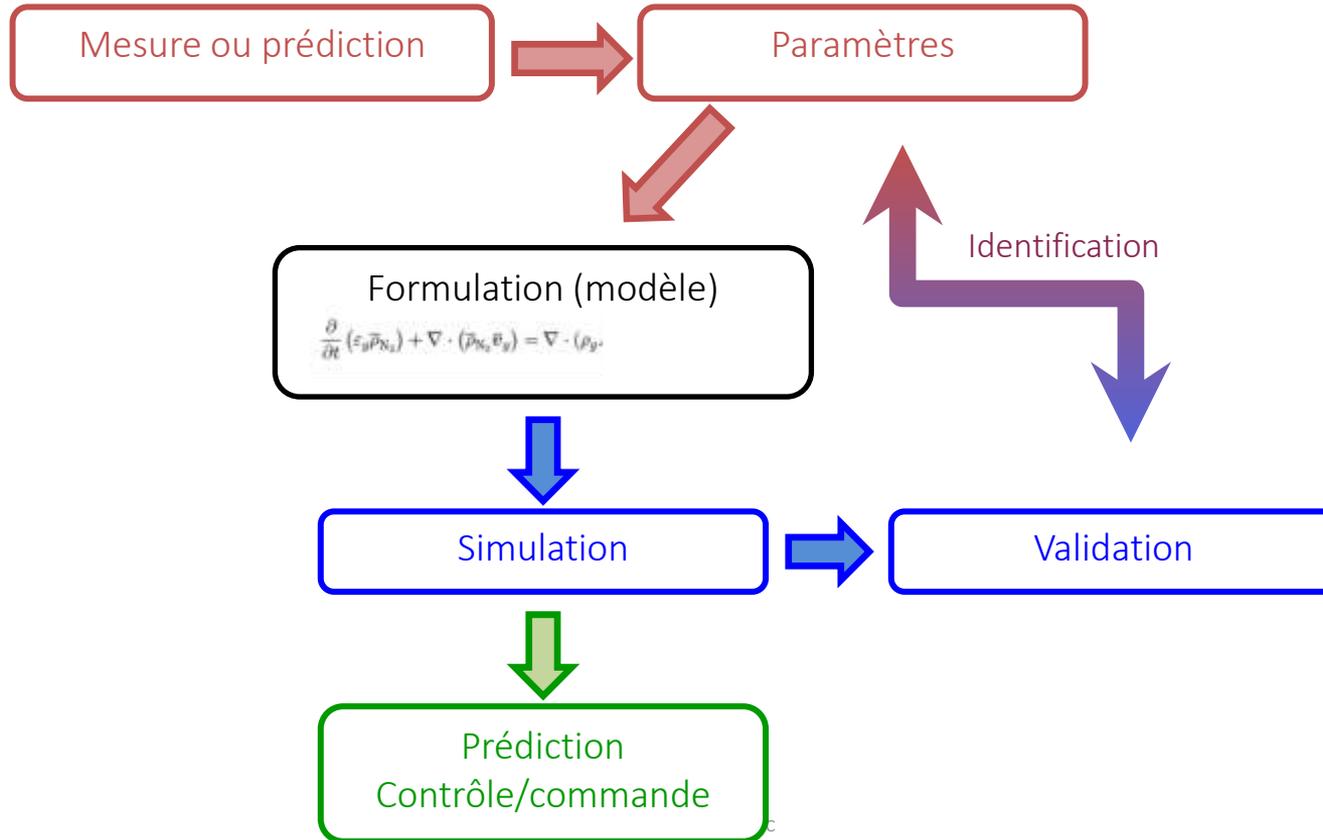

Prof. Patrick Perré

Plan

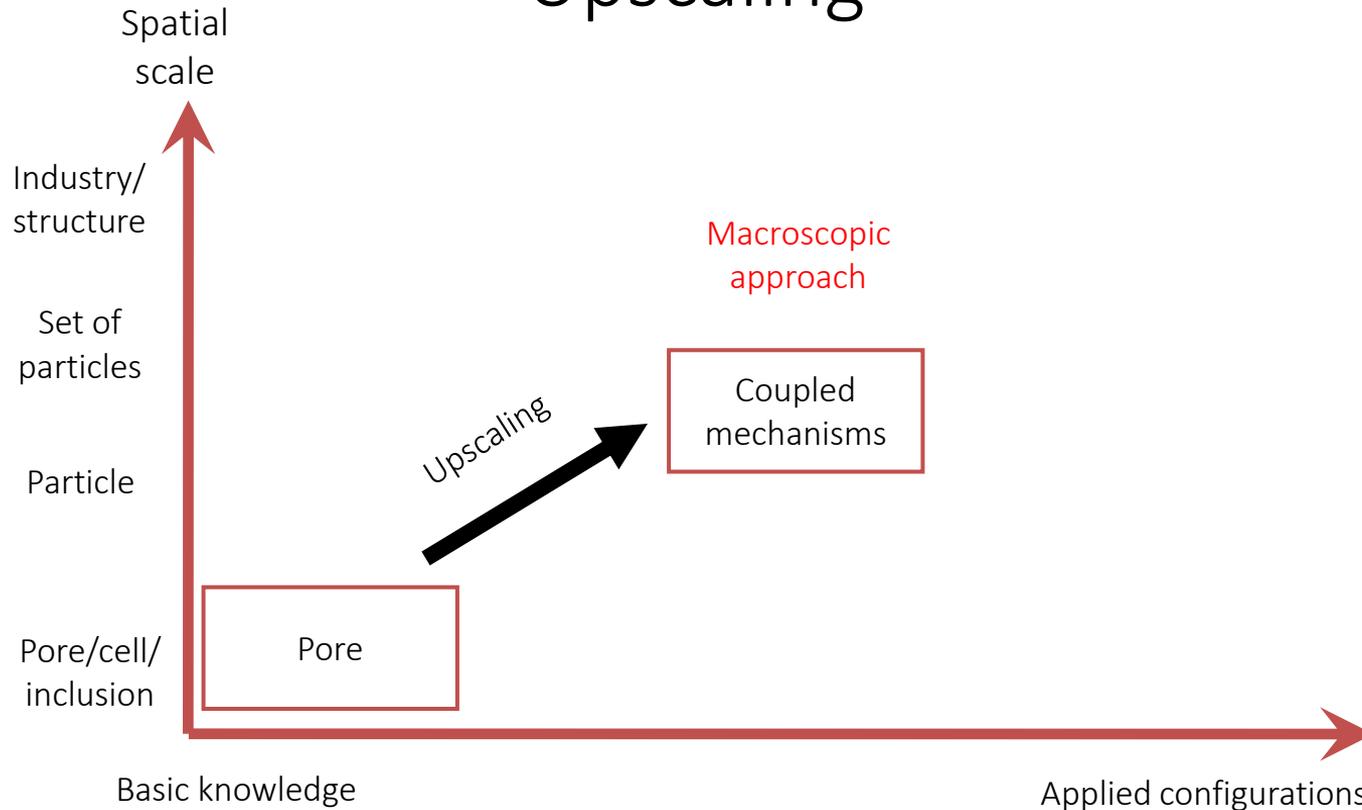

- Quelques mots sur CEBB et chaire biotechnologie de CS
- Modélisation prédictive et changement d'échelle
- Quelques exemples d'application
 - Séchage bois énergie
 - Fermentation
 - Bio-matériaux
- Perspectives

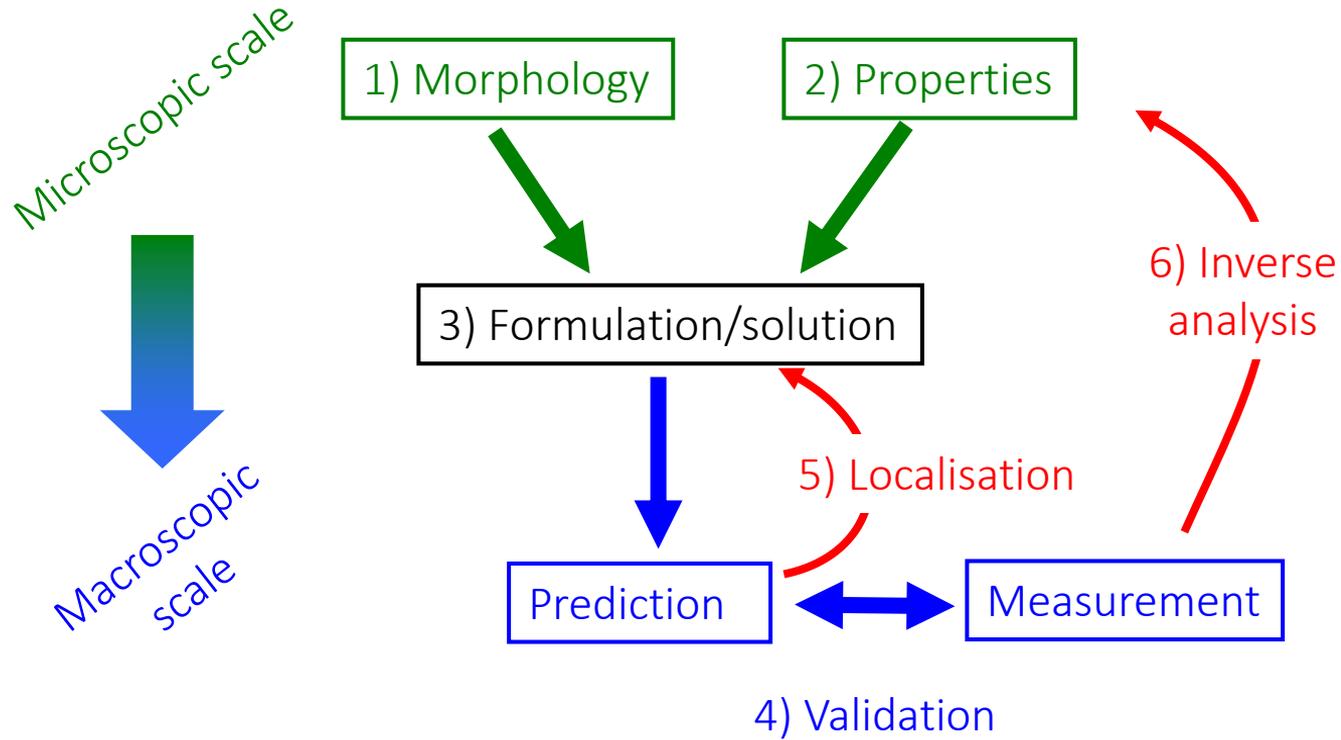

La simulation prédictive

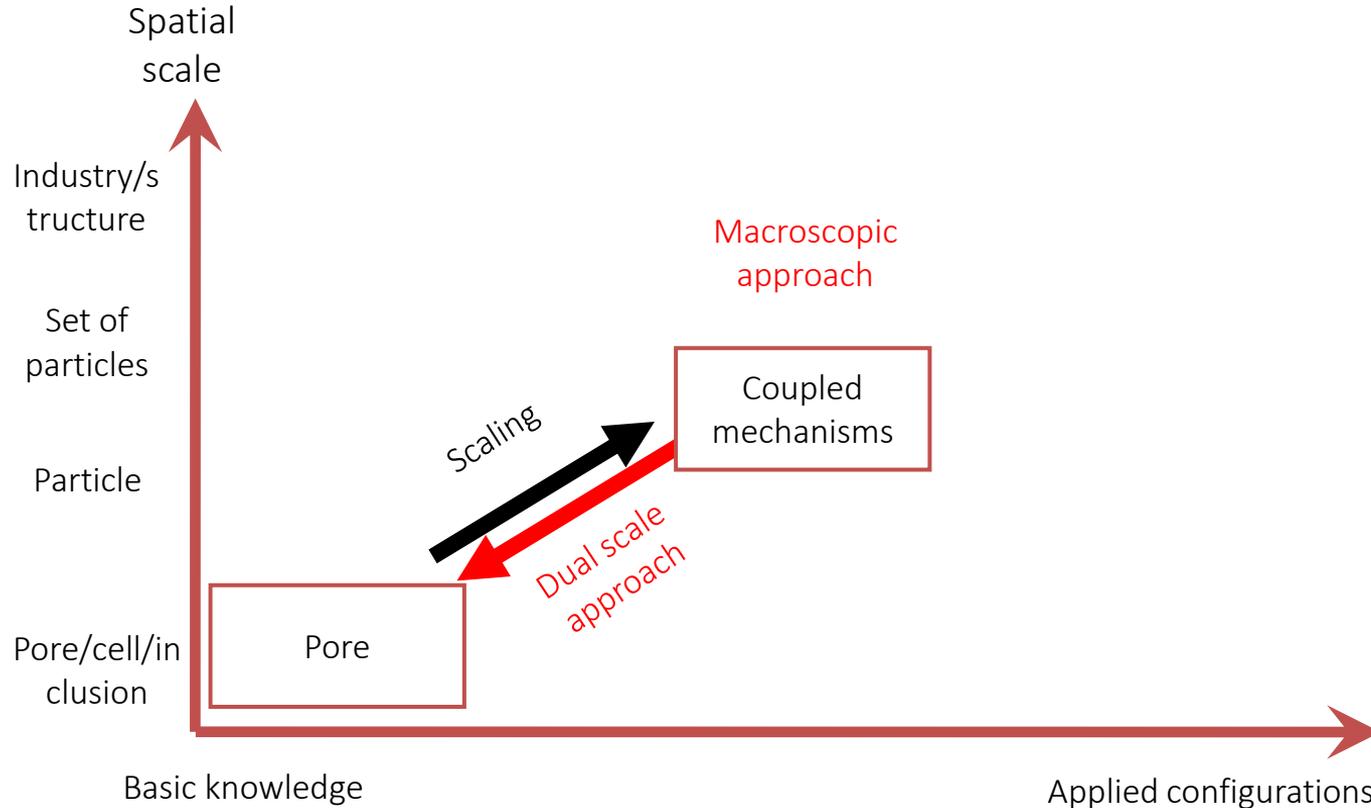

Upscaling

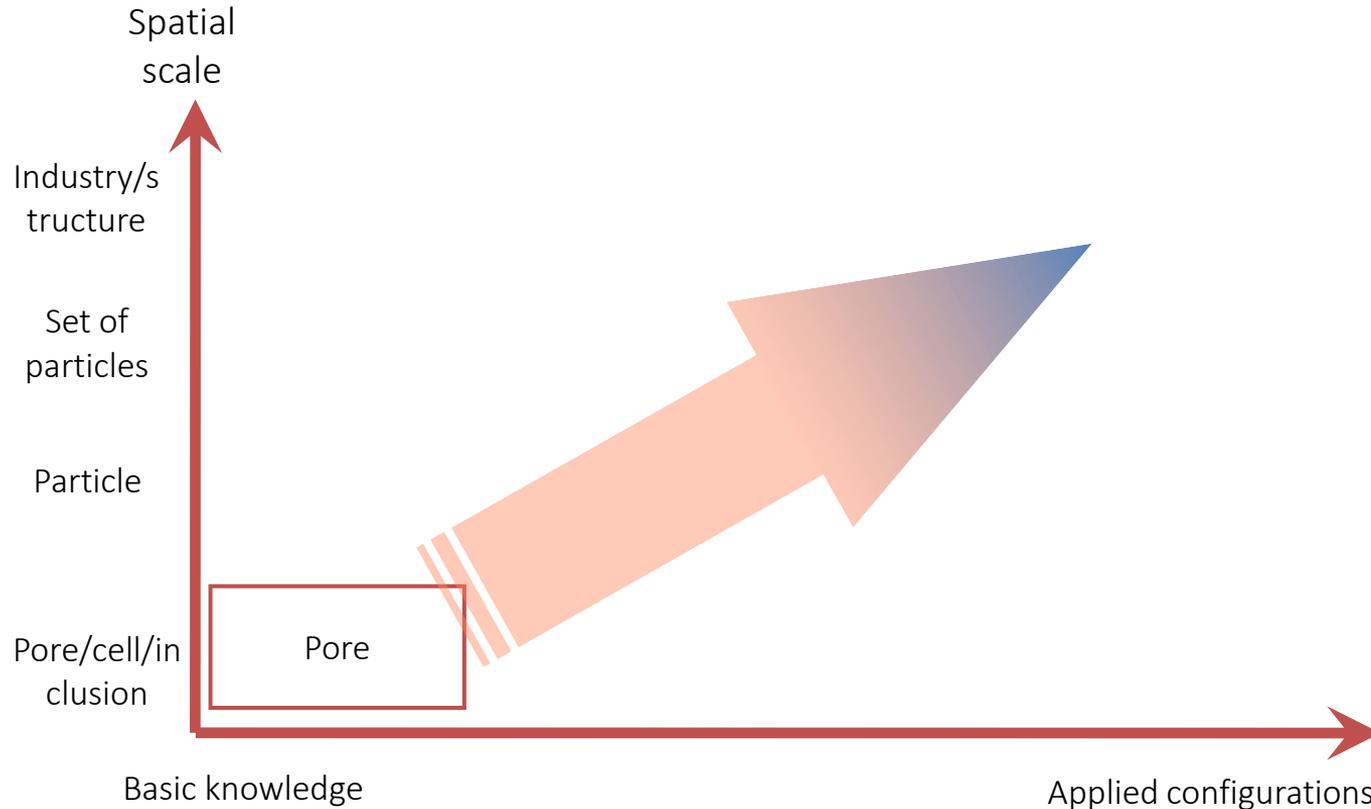

Principle of upscaling

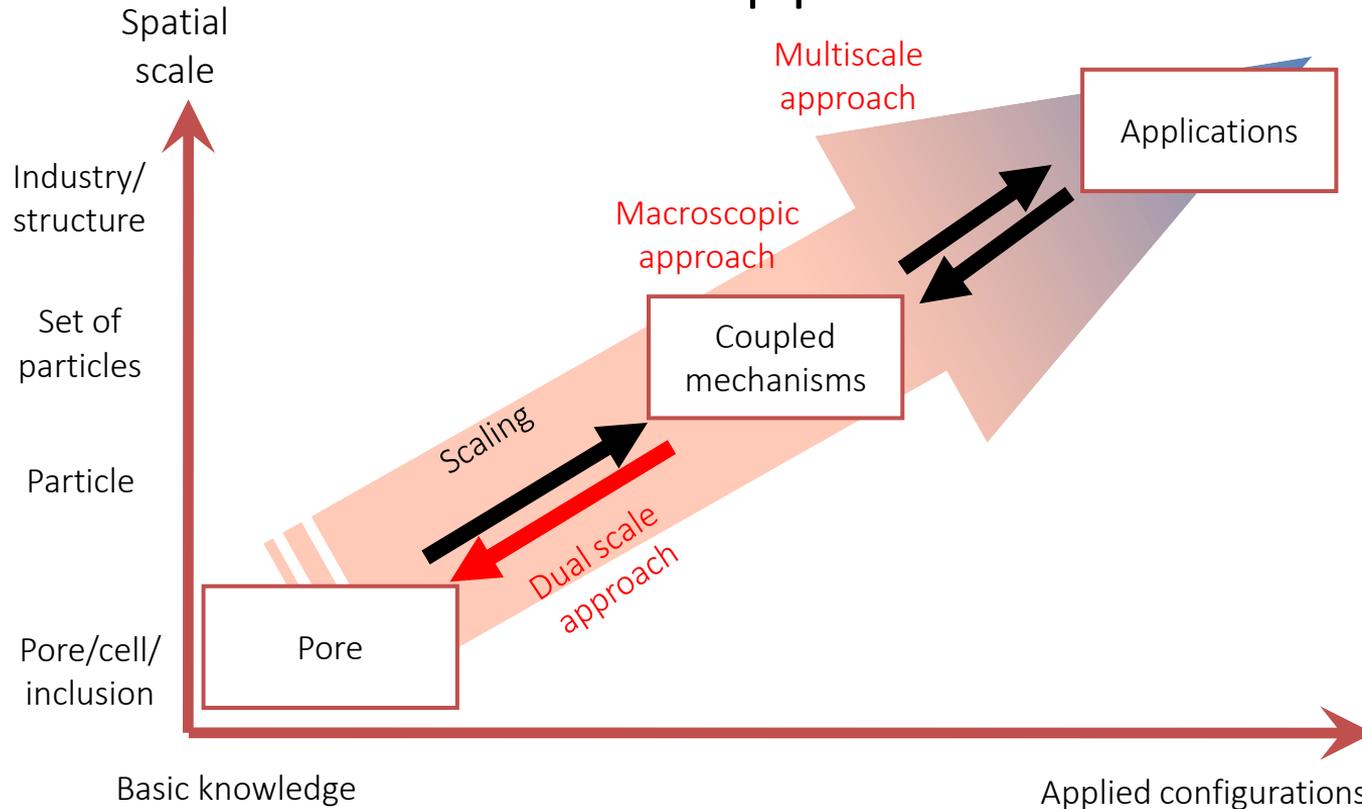

Multiscale approach

Downscaling ?

Towards applications

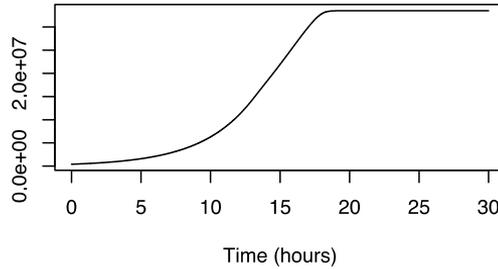

Quelques exemples d'application

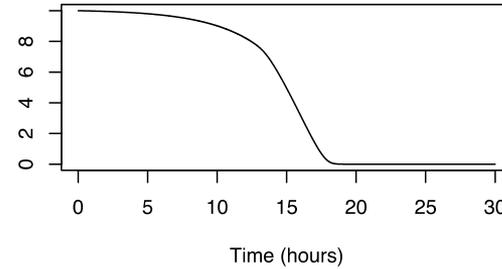

Exemple sur levure (respiration → fermentation)

Modèle bioréacteur

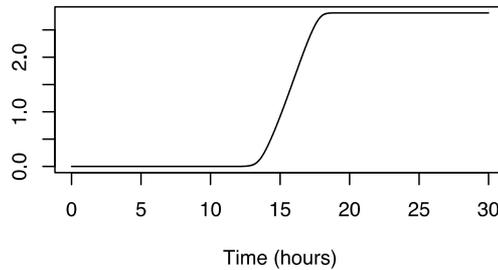

Levure

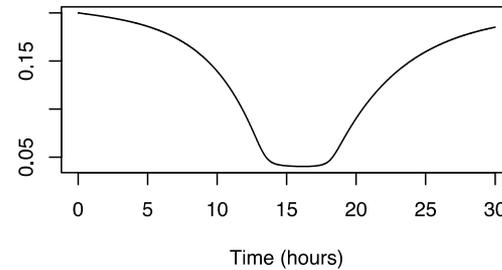

Glucose

Ethanol

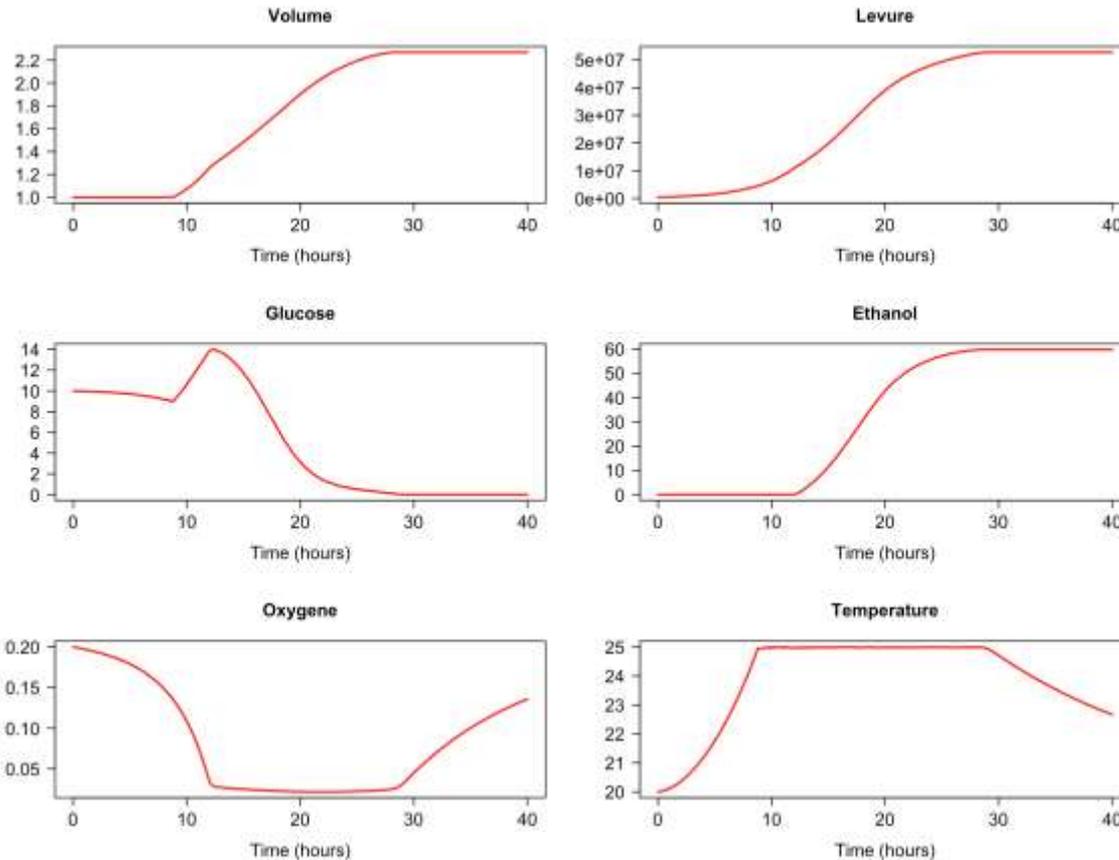

Oxygene

Contrôle d'un fermenteur par T

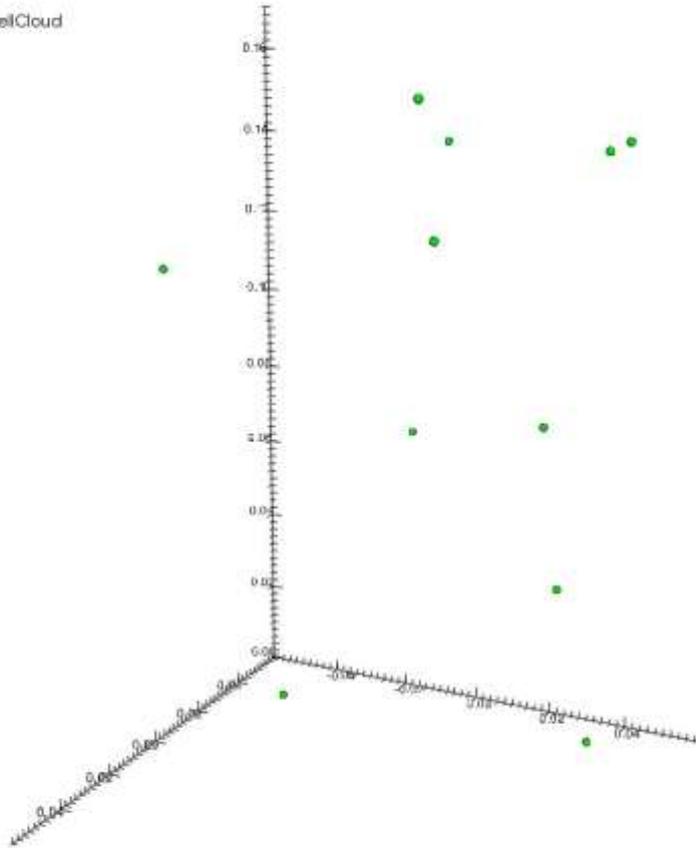

Contrôle d'un fermenteur par T

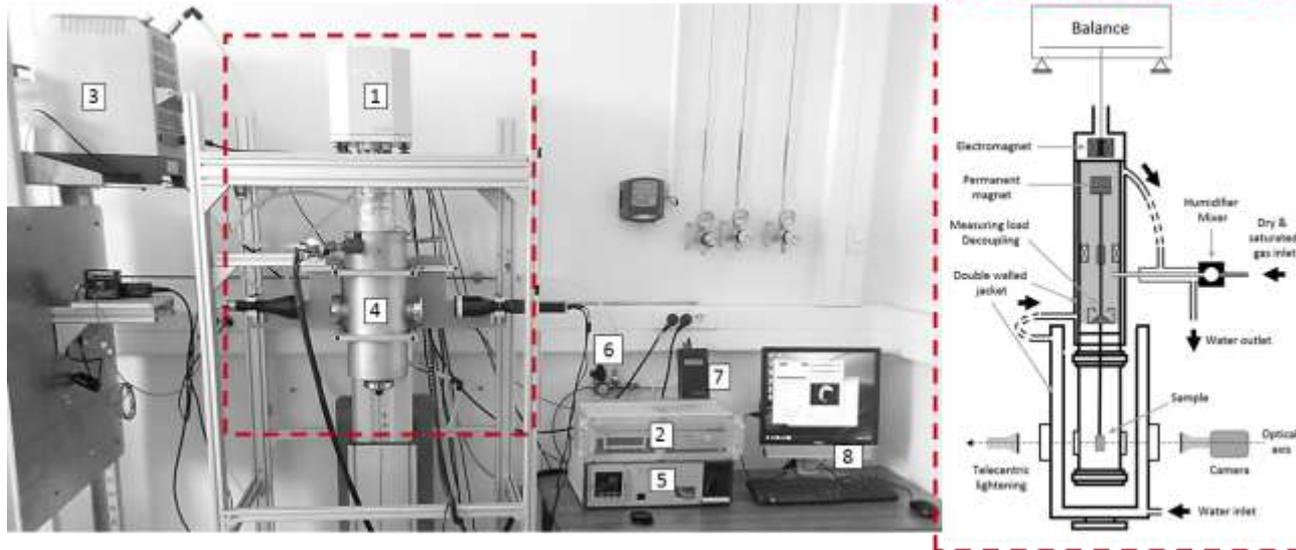

DB: T
Time:0

Mesh
Var: lagrangian/cellCloud

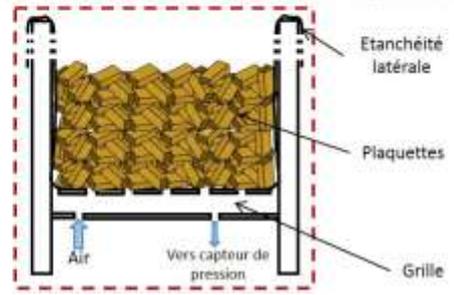

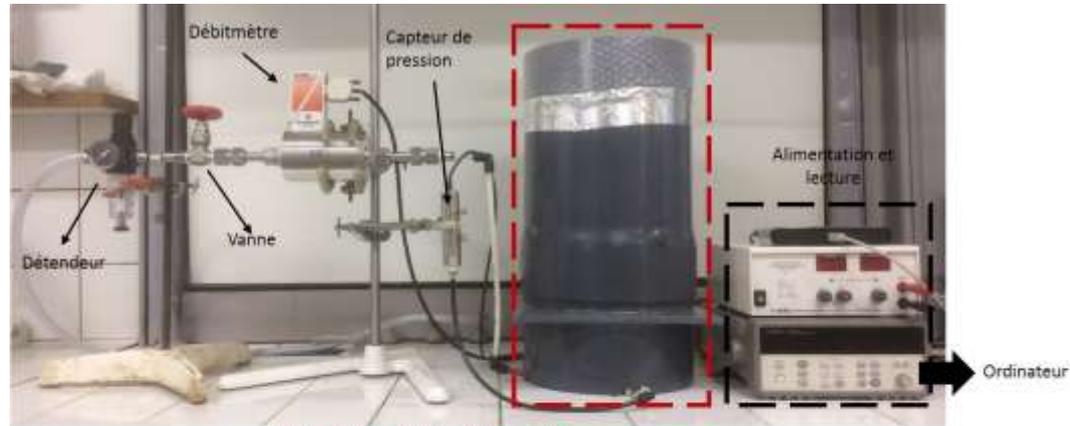

Victor Pozzobon, 2016

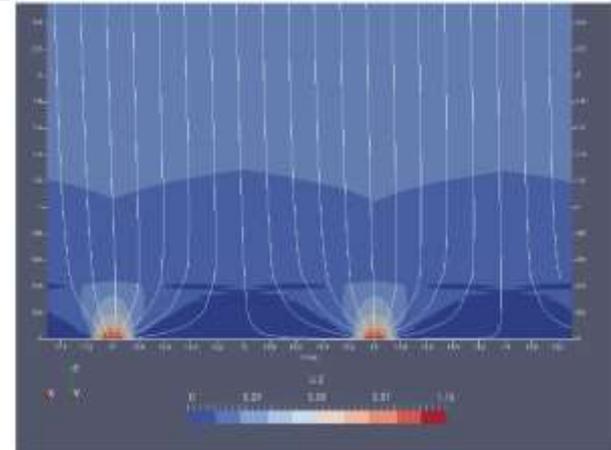

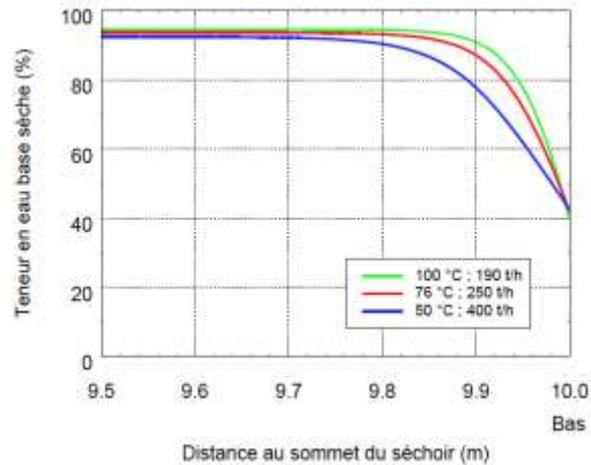

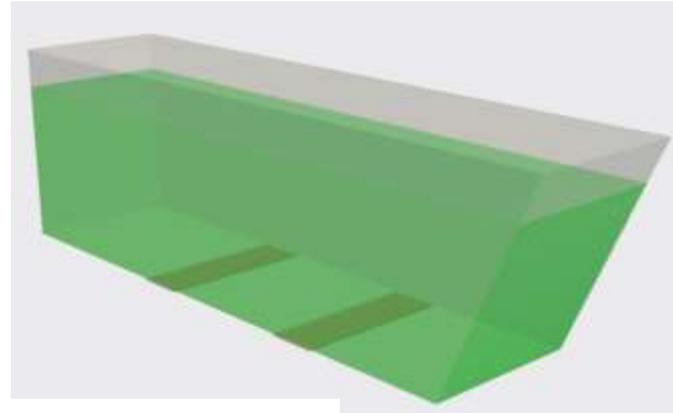

Préséchage bois énergie

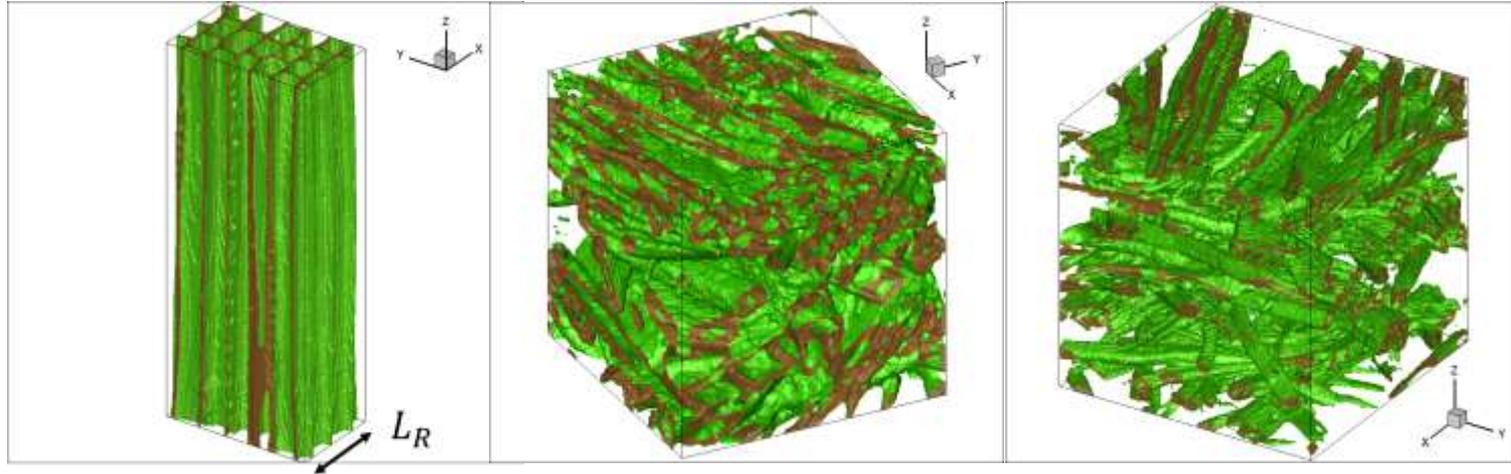

Préséchage bois énergie

Préséchage bois énergie

Matériaux biosourcés

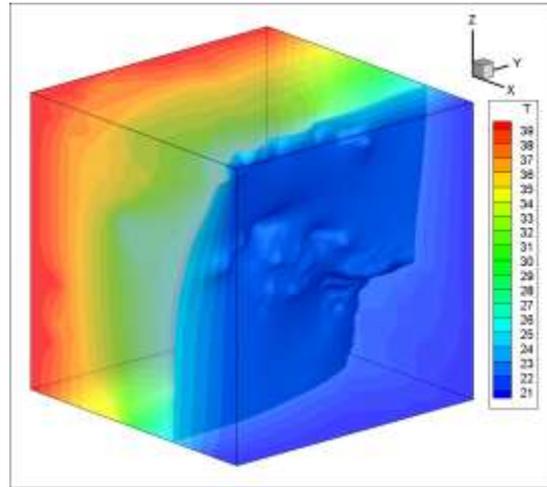

Spruce, earlywood
($435 \text{ kg} \cdot \text{m}^{-3}$)

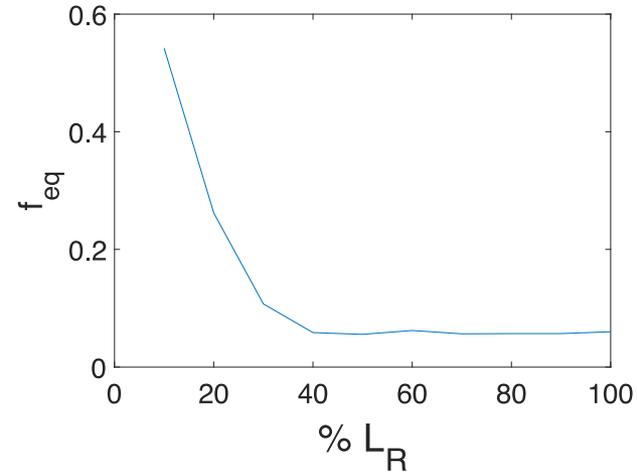

MDF
($645 \text{ kg} \cdot \text{m}^{-3}$)

LDF
($270 \text{ kg} \cdot \text{m}^{-3}$)

LB modelling (parallelised with OpenMP)

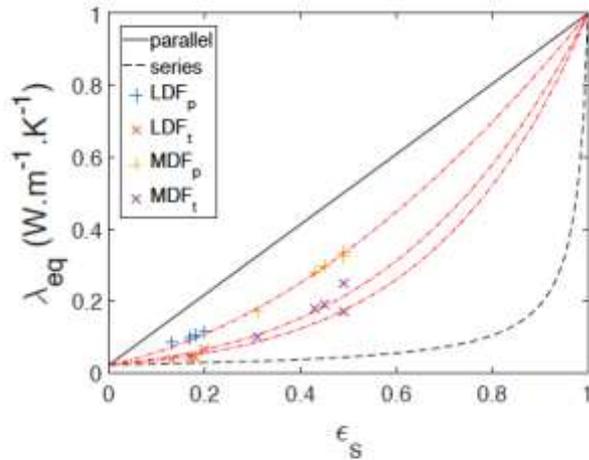

Isovalues (LDF, thermal problem)

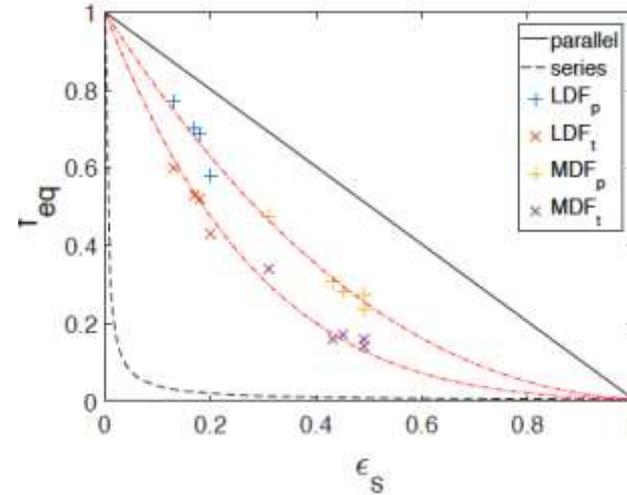

Convergence with the size of the unit cell

Property predictions

$$\Gamma_{\mu} = (\epsilon_g \Gamma_g^{\mu} + \epsilon_s \Gamma_s^{\mu})^{1/\mu}.$$

(a) Thermal diffusion: $\mu(\text{LDF}_t) = 0.11$; $\mu(\text{MDF}_t) = 0.22$
; $\mu_p = 0.53$

(b) Mass diffusion: $\mu_t = 0.18$; $\mu_p = 0.43$

Louërat, Ayouz, Perré, submitted

Un nanotomographe au CEBB

400 nm spatial resolution, \approx 5-hour scan time

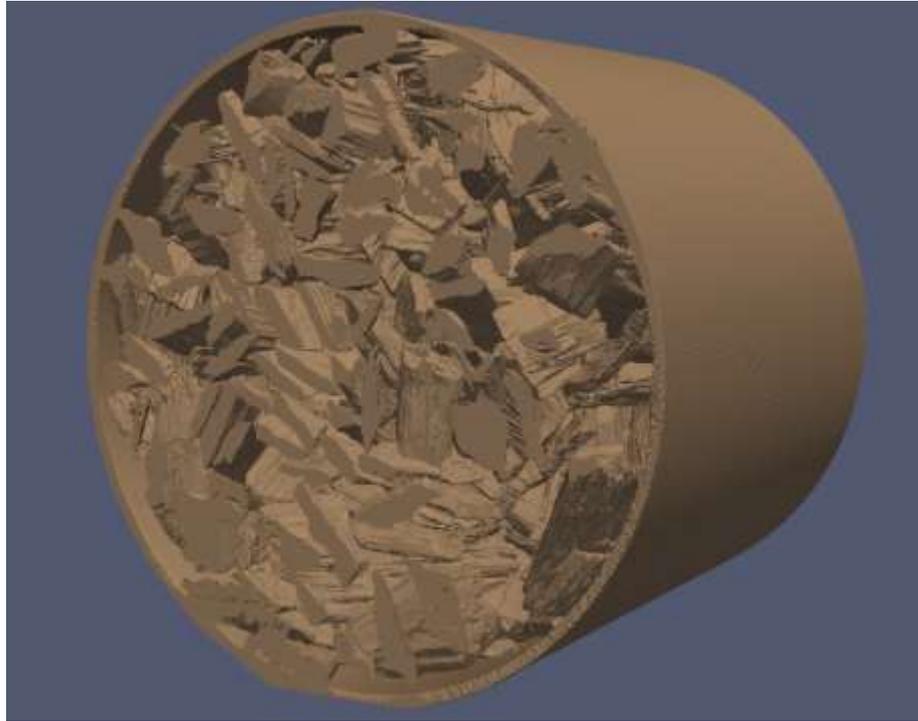

Exemple : composite EcotechLin

Exemple : composite EcotechLin

Ecoulement en milieux fragmentés

Quelques perspectives

- Ensemble de bioréacteurs et photobioréacteurs instrumentés
 - Données pour modèles biologiques
 - Downsizing
- Techniques séparatives
- Nouveaux capteurs
 - Chaire photonics de CentraleSupélec Metz
- Développement d'outils numériques spécifiques
